President's Remarks

This month's newsletter highlights some of the recent software news from Microsoft. If you know someone who would benefit from this news, please pass the information on!

For those who dabble in Microsoft Access, please consider joining me this coming Tuesday, June 26 at noon CT for our next Access Lunchtime meeting. The topic is "Ribbons in Microsoft Access". I will cover:

What is the ribbon?
How do you modify it or create your own custom ribbon?
Enable or disable buttons based on context
If time allows, creating dynamic buttons

Maria Barnes
President
630-715-4452

New Office 365 Email Security

Office 365 users now have access to new security features called "Safety Tips". This new feature will help you quickly identify the potential safety of an email based on a simple color coding system. This article describes the different colors and what they entail.

Office 365 Admin App Update

The Office 365 Admin App was recently updated to make it easier and more efficient to use. Originally designed to be used as an on-the-go enhancement to the admin center, the new version now replaces use of the admin center by many businesses. The new version of this app is available now on Windows and Android and should be available on iOS soon.

Microsoft's Windows 10 Update No Longer Optional?

The new Microsoft 10 update is rumored to no longer be optional. It looks like many users are having the update automatically downloaded without their permission, which can sometimes be damaging to their system. Check out some interesting information. If you haven't updated to Windows 10 and wish to do so or do not wish to update to Windows 10 and need help shutting off your automatic update, contact Barnes Business Solutions, Inc. for assistance.

SQL Server 2016 now available

The newest version of SQL Server is now available for download. The SQL Server blog has a great breakdown of the new features. Please contact Barnes Business Solutions, Inc. for help updating your system.
