March 2022 | Issue Number 54

## Default behavior for Macros in files coming from internet changing

In April, Microsoft will be changing the default behavior of macros for files coming from the internet. This means files you have downloaded from a web site or an email. **VBA macros obtained from the internet will now be blocked by default.** Users will no longer be able to enable content with the click of a button. Get more details by clicking on the button below to go to a Microsoft 365 Blog Post, by Kellie Eickmeyer. With the new behavior the message bar will show a SECURITY RISK indicator with a Learn More button. That will link to this **Microsoft Support article** where you will be presented with some questions and can find instructions on how to use the file properties to mark the file as safe to use. Starting next month, Barnes Business Solutions, Inc. will be delivering emailed solution updates with directions on how to mark our solutions as safe.
