Transform Your Org with Low Code App Platform

Have you heard the term Low Code platform, but wondered just how this can benefit your company? Take a few minutes to learn more about Low Code with this short video that demonstrates how Microsoft Power Apps can unlock the potential for people in your organization to work together and quickly build apps with an intuitive and easy to use platform.

President's Remarks

Are you on board with the Low-Code No-Code movement? Or do you think it is just hype? Our feature story explains how the power of such a platform can enable your business to keep up with a rapidly changing technology landscape by empowering your business experts to develop applications without having to wait in the IT queue.

What if your business expert does not have the time to learn how to do this, to actually develop the application, or simply needs advice on his or her approach? This is where Barnes Business Solutions can help. Give us a call or drop us an email today!

Transform Your Org with Low Code App Platform

Feedback for Access moves off of UserVoice

Provide feedback for Microsoft Access through [Microsoft's Feedback Portal](#). Do you have an idea or suggestion for product improvement? Peruse the existing feedback to see if the idea is already there and if so vote and/or comment on it! If not add your idea! There are already 80 items listed.

Office 2021 Highlights

Take a look at what you will get with [Office 2021](#). New features include real-time co-authoring, Teams, Windows 11 consistent themes, modernize your formulas in Excel, and record PowerPoint presentations with ease.

Relax, no one's forcing you to upgrade to Windows 11

Always a pretty reliable and generally unbiased resource CNET Tech published this article titled [Relax, no one's forcing you to upgrade to Windows 11](#) which discusses whether you should upgrade now or not. The most exciting new feature I see is the ability to natively install Android apps. Nothing so exciting though to make me want to risk it yet. I generally give system upgrades at least 6 months so that other people can deal with the headaches/bugs, and Microsoft can have time to iron some of those out. By then there is usually plenty of information about how stable the release is!
